SUBJECT: ADDENDUM #2 to RFP #119025 – Jail Security Camera Upgrade & Maintenance

**Question 1**

Shall Each Touch Screen have the ability to call up cameras on the Bosch workstation that is controlled by and associated with that touchscreen?

**Answer:** The Wonder Ware touch screens on 7 West and 6 West do NOT need to be able to call up cameras on the Bosch workstation IF the ViconNet Virtual Matrix controllers on 7 West and 6 West are replaced with a BVMS system that allows Bosch camera selection on multiple monitors with multiple quadrants or the ViconNet Virtual Matrix controllers modified to work with Bosch system. This response does NOT apply to the Wonder Ware touch screen work stations in PSB, CCB Central Control or Court House Custody Control. See “Additional description” in last section for more detail.

**Question 2**

Shall all camera call-ups (and intercom call-ups) take place on a monitor that is directly attached to a full feature BVMS workstation?

**Answer:** BVMS will NOT be replacing Wonder Ware work stations in Central Controls or Custody Control. If this is correct, the BVMS work stations DO need to provide full access to camera call-ups but do NOT need to provide access to intercom call-ups. Complete Intercom call ups need to occur in PSB Central Control, CCB Central Control and Court House Custody Control. Complete Intercom call ups are NOT needed for CCB 6W & CCB 7W Deputy Control Room. These two areas only need intercom access to the doors in those work areas that have intercoms installed.

**Question 3**

Shall all camera call-ups occur with the use of the Bosch SDK utilizing separate, dedicated hardware component(s) such as Decoder(s), to facilitate call-up functionality?

**Answer:** Reducing the number of connection devices reduces the number of future failure points. When changing to a new updated system as many network parts as possible should be updated/changed to match the new update system to insure each part is designed to work with the new modern system.

**Question 4**

Shall all coax to Fiber converters (IFS, Vicon, etc.) in the Courthouse be removed and replaced with network attached encoders?

**Answer:** If this change updates the system and make it more reliable, better network bandwidth and more consistent with the modern Bosch system then it should be done.

### **Question 5**

Shall all designated video review workstations where you intend to export and burn video (to DVD or CD) have on board, internal DVD/CD writing capability? If so, which stations are to be designated as video review workstations where you intend to burn video?

**Answer:** IF archive video server storage is implemented then any existing reviewing Bosch work stations do NOT need to have internally motherboard connected DVD tray.

From this point forward, any additional added Bosch work stations do need to have an internally motherboard connect DVD tray.

IF archive video server storage is NOT implemented then the following Bosch work station used for review DO need an internally motherboard connected DVD tray:

- PSB Sergeant's Office, - currently Bosch & ViconNet (current Bosch station needs internal DVD)
- PSB 3<sup>rd</sup> Floor Move 3 Office, - currently ViconNet (new Bosch station needs internal DVD)
- PSB 1<sup>st</sup> Floor Central Booking, - currently ViconNet (new Bosch station needs internal DVD)
- PSB 2<sup>nd</sup> Floor Sup. Services LTE,-currently Bosch & ViconNet (current Bosch station needs internal DVD)
- CCB Sergeant's Office, - currently Bosch & ViconNet (current Bosch station needs internal DVD)
- CCB 7West Report Writing Room – currently Bosch (current Bosch station needs internal DVD)
- Courthouse 2<sup>nd</sup> Floor Bailiff's Office – currently ViconNet (new Bosch station needs internal DVD)
- Courthouse LL2 – Custody Control – currently ViconNet (new Bosch station needs internal DVD)

### **Question 6**

Shall the required separate and secure server space designated for video archived as part of the jail investigations be a rack mounted, business class, RAID 6 high performing Network Attached Storage solution with NAS/Enterprise-grade hard drives included?

**Answer:** If this is a quality secure server system AND if the archived video is backup'ed in case of hard drive failure. In addition, management software needs to be provided so that archived / saved video can be labeled multiple ways and electronically searched for multiple ways (i.e. date, location, Inmate Name, type of incident) – Similar to Panasonic Arbitrator 360 software.

**Please acknowledge receipt of this addendum by noting “Addendum #1 Received” on the Signature Affidavit page when you submit your bid. If you have any questions regarding this addendum, please contact me at 608-283-1487.**

Sincerely,

Megan Rogan
